Datatype (Items, Attributes, Links, Positions, Grids)
It only shows specific properties that can be measured such as price.

Data and Dataset Types (Tables, Networks & Trees, Fields, Geometry, Clusters, Sets, Lists)
The graph is used as a visual representation of a table.

Dataset Types (Tables, Networks, Fields, Multidimensional Table, Trees, Geometry)
The graph is used as a visual representation of a table.

Dataset Availability (Static, Dynamic)
Can be changed to any range of time.

Attribute Types(Categorical, Ordered, Quantitative)
It shows the prices of bitcoin which is quantitative data.

Ordering Direction (Sequential, diverging, cyclic)
Dataset goes from a starting date to end date making it sequential.

Datatype (Items, Attributes, Links, Positions, Grids)
It only shows specific properties that can be measured such as price.

Data and Dataset Types (Tables, Networks & Trees, Fields, Geometry, Clusters, Sets, Lists)
The graph is used as a visual representation of a table.

Dataset Types (Tables, Networks, Fields, Multidimensional Table, Trees, Geometry)
The graph is used as a visual representation of a table.

**Dataset Availability** (Static, Dynamic)
Some parts can be changed to any range of time making it both static and dynamic.

Attribute Types(Categorical, Ordered, Quantitative)
It shows quantitative data of bitcoin such as price, transaction fee, etc.

Ordering Direction (Sequential, diverging, cyclic)
Dataset goes from a starting date to end date making it sequential.

Total Bitcoins (sum of all currently existing Bitcoins)	16,675,224 BTC
Market Capitalization (market value of all currently existing Bitcoins)	$128,565,224,145 USD
